## BIRTHS

The number of births registered during the year was 63,646, being a numerical decrease of 3,196 or 3.79% fewer than the number registered in 1932. The rate is 18.1 per 1,000 of population and is the lowest rate recorded since 1875 when the rate was 14.9. Birth rates are affected by marriage rates and there has been a decline in the marriage rate during the last four years (those for 1932 and 1933 remaining the same) and the birth rates have fallen in sympathy.

There is little doubt that the economic conditions prevailing have been the chief factor in affecting the birth and marriage rates for, in 1929, when prosperity was being enjoyed by practically everyone, the marriage rate was the highest

since 1921 and the following year the birth rate was higher than it has been since 1926.

Of all births 60.15% were of mothers under 26 years of age and the balance, 39.85% of mothers were over that age.

There were 32,630 males and 31,016 female births being at the rate of 105.7 males to 100 females.

The rate of illegitimate births continues on a rising trend and the rates of the last three years indicate that more than 4 % of all living births are in this class.

Of these births 45.4 % were contributed by mothers 16-20 years of age and 29.16 % by mothers 20-24 years old, making a total of almost 75 % by mothers between 16-24 years of age.

1923.....	3,028	41.4	1933.....	2,161	33.9

It is gratifying to note a further drop in the stillbirth rate. This is the lowest since 1920. As between 1920 and 1921 there was a rise amounting to over 12.5 % in the rate and this has been more or less maintained until 1932 when there was a definite decline, with a further decline in 1933.

## MULTIPLE BIRTHS

There were 715 cases of twin births. Of these 729 were males and 731 females.

There were 10 cases of triplets, 18 boys and 12 girls.

Table 15 will give a detailed explanation of the multiple births.

1928.....	25,728	7.8	1933.....	22,587	6.4

The tables dealing with marriages from various angles are numbered 16 to 22.

The marriage rate is the same as for the preceding year and is the lowest since 1875 when the rate was 5.9. The falling marriage rate is indicative of economic conditions.

The highest marriage rate for many years was in 1921, when it was 8.5.

The average at marriage was: for men 27.8 years, and for women 24.4 years.

## DIVORCES

There were 308 Notices of Decrees Absolute filed with the Registrar-General during the year. Of these, 127 or 41.2% were granted to men and 181 or 58.8% to women.

In 1932 there were 166 or 48.4% to men and 177 or 51.6% to women, making a total of 343.

The following Table indicates the period of married life preceding the divorce:

8. All others.....	10.5	10.2	9.2	8.6	7.3	7.7	7.7	6.0	5.6	5.5	7.8

Of these infant deaths:

859 or 22.58 per cent. lived less than one day.  
 773 or 20.32 per cent. lived less than one week.  
 512 or 13.45 per cent. lived less than one month.  
 515 or 13.54 per cent. lived less than three months.  
 529 or 13.91 per cent. lived less than six months.  
 366 or 9.62 per cent. lived less than nine months.  
 250 or 6.57 per cent. lived less than one year.

The year 1921 was a banner year for births, the highest number and rate (74,152—25.3) in the history of registration being recorded, and although the highest too for stillbirths, it was actually the lowest infant mortality rate ever recorded up to that time, being 91.2 per 1,000 total births.

In commenting on the fact that the infant death rate has reached a new low level, it is of interest to point out that for the first time in the statistical history of the province, the downward trend in infant mortality has been maintained for a period of four consecutive years. Further, the number of deaths ascribed to prematurity, birth injury and congenital weakness has likewise steadily fallen during the last four years. (The possible relationship between the persistent decline in the birth rate during this period and the mortality rate among infants cannot be ignored). Fluctuations in the rate due to the unexplained rise in the number of those dying from gastric-intestinal disorders continue, but the increase this year was not great enough to appreciably affect the rate as a whole.

### MATERNAL MORTALITY

During the year 1933 there were 346 deaths registered, being a rate of 5.44 per 1,000 living births and is the same rate as obtained in 1931. When stillbirths are included the rate is reduced to 5.09.

There is therefore a slight increase in the rate.
